

# Unit 2 Project Demo: Full-Stack Application

## Introduction

It's time to put everything that you've learned together! In this project, you will build a full-stack web application! You can either take your existing front-end application and add a back-end, or you can create an entirely new project with both a front-end and back-end.

You will also have the opportunity to formally present this project to your peers, building upon the skills you built in the **Demo Your Code** module, and preparing to talk about your projects for the job search ahead.

## Learning Goals

- Practice using accurate technical terminology to describe the applications you have built.
- Practice talking about your tech-stack, problem-solving, and decision-making skills.
- Gain experience demoing your code.

## Demo Task

10-minute presentation demonstrating:

1. Website functionality
2. Code explanation of one CRUD feature
3. Main challenges and solutions

4. Future enhancement plans
5. Q&A Session

## **Demo Submission**

You should plan to present your demo live in class. If you are absent the day of your demo, work with course staff to find another time to present your demo.
